
Actions:
- Select book: User clicks on specific book to see its details.
- Check login status: System verifies whether the user is currently authenticated, this happens automatically when user tries to interact with book
- Login: represents login action
- Check availability: check book status
- Loan: Represents loan button
- Reserve: Represents reserve button
- Book available notification - User get email when book is available to loan.

Decision points:
- [logged in] [not logged in] : represents whether user is logged in or not
- [available] [not available] : represents book status, if available user can loan it, if not available user can reserve book.
